

## MATH MCS MYP UNIT PLANNER

<b>Teacher(s)</b>	Benson, Liston, McQueen	<b>Subject group and discipline</b>	Honors Algebra 1		
<b>Unit title</b>	DOE Unit 4 – Modeling and Analyzing Exponential Functions	<b>MYP year</b>	4	<b>Unit duration (hrs)</b>	16.5

### Inquiry: Establishing the purpose of the unit

Key concept	Related concept(s)	Global context
Relationships	Patterns Representation	Scientific and Technological Innovations  Opportunity and Risk
<b>Statement of inquiry</b>		
Patterns and representations create relationships that can be used to determine opportunity and risk.		
<b>Inquiry questions</b>		
<p><b>Factual—</b></p> <p>What is an exponential function?</p> <p>What is exponential growth?</p> <p>What is exponential decay?</p> <p>What is a geometric sequence?</p> <p><b>Conceptual—</b></p> <p>How do I solve an exponential equation in one variable?</p> <p>How do I use graphs to represent and solve real-world equations?</p> <p>How do I interpret functions that arise in applications in terms of context?</p> <p>Why are geometric sequences functions?</p> <p>How do I use different representations to analyse exponential functions?</p> <p>How do I build exponential functions that can model a relationship between two quantities?</p>		

How do I build new functions from existing functions?

How can we use real –world situations to construct and compare exponential models and solve problems?

What are the effects on the graph of replacing  $f(x)$  by  $f(x) + k$ ,  $k f(x)$ ,  $f(kx)$ , and  $f(x + k)$  for specific values of  $k$  (both positive and negative)? How do I find the value of  $k$  given the graphs?

**Debatable—**

Which exponential model/equation is best to use when solving exponential application problems?

MYP Objectives	Assessments
Objective D – Real Life Application of Mathematics	Formative: Quiz (3.1-3.4)  Summative: Unit 3 Test

**Approaches to learning (ATL)**

- Understand and use mathematical notation
- Take effective notes in class
- Structure information in summaries, essays, and reports
- Identify trends and forecast possibilities
- Make connections between various sources of Information
- Present information in a variety of formats and platforms

**Action: Teaching and learning through inquiry**

**Content Standards**

**Create equations that describe numbers or relationships**

**MGSE9–12.A.CED.1** Create equations and inequalities in one variable and use them to solve problems. Include equations arising from ~~linear, quadratic, simple rational,~~ and exponential functions (integer inputs only).

**MGSE9–12.A.CED.2** Create ~~linear, quadratic, and~~ exponential equations in two or more variables to represent relationships between quantities; graph equations on coordinate axes with labels and scales. (The phrase “in two or more variables” refers to formulas like the compound interest formula, in which  $A = P(1 + r/n)^{nt}$  has multiple variables.)

**Build a function that models a relationship between two quantities.**

**MGSE9–12.F.BF.1** Write a function that describes a relationship between two quantities.

**MGSE9–12.F.BF.1a** Determine an explicit expression and the recursive process (steps for calculation) from context. For example, if Jimmy starts out with \$15 and earns \$2 a day, the explicit expression “ $2x+15$ ” can be described recursively (either in writing or verbally) as “to find out how much money Jimmy will have tomorrow, you add \$2 to his total today.”  $J_n = J_{n-1} + 2$ ,  $J_0 = 15$

**MGSE9–12.F.BF.2** Write ~~arithmetic and~~ arithmetic and geometric sequences recursively and explicitly, use them to model situations, and translate between the two forms. Connect ~~arithmetic sequences to linear functions~~ arithmetic sequences to linear functions and geometric sequences to exponential functions.

**Build new functions from existing functions.**

**MGSE9–12.F.BF.3** Identify the effect on the graph of replacing  $f(x)$  by  $f(x) + k$ ,  $k f(x)$ ,  $f(kx)$ , and  $f(x + k)$  for specific values of  $k$  (both positive and negative); find the value of  $k$  given the graphs. Experiment with cases and illustrate an explanation of the effects on the graph using technology. ~~Include recognizing even and odd functions from their graphs and algebraic expressions for them.~~ (Focus on vertical translations of graphs of linear and exponential functions. Relate the vertical translation of a linear function to its  $y$ -intercept.)

**Understand the concept of a function and use function notation.**

**MGSE9–12.F.IF.1** Understand that a function from one set (the input, called the domain) to another set (the output, called the range) assigns to each element of the domain exactly one element of the range, i.e. each input value maps to exactly one output value. If  $f$  is a function,  $x$  is the input (an element of the domain), and  $f(x)$  is the output (an element of the range). Graphically, the graph is  $y = f(x)$ .

**MGSE9–12.F.IF.2** Use function notation, evaluate functions for inputs in their domains, and interpret statements that use function notation in terms of a context.

**MGSE9–12.F.IF.3** Recognize that sequences are functions, sometimes defined recursively, whose domain is a subset of the integers. (Generally, the scope of high school math defines this subset as the set of natural numbers 1,2,3,4...) By graphing or calculating terms, students should be able to show how the recursive sequence  $a_1=7$ ,  $a_n=a_{n-1} + 2$ ; the sequence  $s_n = 2(n-1) + 7$ ; and the function  $f(x) = 2x + 5$  (when  $x$  is a natural number) all define the same sequence.

**Interpret functions that arise in applications in terms of the context.**

**MGSE9–12.F.IF.4** Using tables, graphs, and verbal descriptions, interpret the key characteristics of a function which models the relationship between two quantities. Sketch a graph showing key features including: intercepts; interval where the function is increasing, decreasing, positive, or negative; relative maximums and minimums; symmetries; end behavior; and ~~periodicity.~~

**MGSE9–12.F.IF.5** Relate the domain of a function to its graph and, where applicable, to the quantitative relationship it describes. For example, if the function  $h(n)$  gives the number of person–hours it takes to assemble  $n$  engines in a factory, then the positive integers would be an appropriate domain for the function.

**MGSE9–12.F.IF.6** Calculate and interpret the average rate of change of a function (presented symbolically or as a table) over a specified interval. Estimate the rate of change from a graph.

**Analyze functions using different representations.**

**MGSE9–12.F.IF.7** Graph functions expressed algebraically and show key features of the graph both by hand and by using technology.

**MGSE9–12.F.IF.7e** Graph exponential and logarithmic functions, showing intercepts and end behavior, and ~~trigonometric functions, showing period, midline, and amplitude.~~

**MGSE9–12.F.IF.9** Compare properties of two functions each represented in a different way (algebraically, graphically, numerically in tables, or by verbal descriptions). For example, given a graph of one function and an algebraic expression for another, say which has the larger maximum.

**Learning Activities and Experiences**
