| Accelerated Grade 6/7 Mathematics |  |  |  |  |  |
| Unit title | Unit 2: Rational Exploration: Numbers and their Opposites | MYP year | 1 | Unit duration (hrs) | 20 hours |
| Mastering Content and Skills through INQUIRY (Establishing the purpose of the Unit): What will students learn? |  |  |  |  |  |
| GA DoE Standards |  |  |  |  |  |
| Standards |  |  |  |  |  |
| 6.NR.3: Solve a variety of problems involving whole numbers and their opposites; model rational numbers on a number line to describe problems presented in relevant, mathematical situations. |  |  |  |  |  |
| 6.NR.3.1 Identify and compare integers and explain the meaning of zero based on multiple authentic situations. |  |  |  |  |  |
| 6.NR.3.2 Order and plot integers on a number line and use distance from zero to discover the connection between integers and their opposites. |  |  |  |  |  |
| 6.NR.3.3 Recognize and explain that opposite signs of integers indicate locations on opposite sides of zero on the number line; recognize and explain that the opposite of the opposite of a number is the number itself. |  |  |  |  |  |
| 6.NR.3.4 Write, interpret, and explain statements of order for rational numbers in authentic, mathematical situations. Compare rational numbers, including integers, using equality and inequality symbols. |  |  |  |  |  |
| 6.NR.3.5 Explain the absolute value of a rational number as its distance from zero on the number line; interpret absolute value as distance for a positive or negative quantity in a relevant situation. |  |  |  |  |  |
| 6.NR.3.6 Distinguish comparisons of absolute value from statements about order. |  |  |  |  |  |
| 7.NR.1.1 Show that a number and its opposite have a sum of 0 (are additive inverses). Describe situations in which opposite quantities combine to make 0 . |  |  |  |  |  |
| MCS.Gifted.S2B. Develop and apply the cognitive components of creative thinking: fluency, flexibility, originality, and elaboration. |  |  |  |  |  |
| MCS.Gifted.S2D. Apply components of creative thinking in finding, solving, and evaluating solutions to authentic real-world problems and dilemmas. |  |  |  |  |  |
| MCS.Gifted.S3C Use a variety of strategies for solving authentic, complex, real world problems through evaluative thinking and the engineering design processes. |  |  |  |  |  |
| MCS.Gifted.S4B Recognize and examine the value of others strengths, thoughts, ideas, and feelings during collaboration. |  |  |  |  |  |
| MCS.Gifted.S4D Respectfully collaborate and effectively communicate exchanges of constructive/critical feedback. |  |  |  |  |  |
| MCS.Gifted.S6 Students will become self-directed, independent learners. |  |  |  |  |  |
| Concepts/Skills to support mastery of standards |  |  |  |  |  |

[^0]Resources, materials, assessments not linked to SGO or unit planner will be reviewed at the local school level.

|  | Expectations | Evidence of Student Learning <br> (not all inclusive; see Grade Level Overview for more details) |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 6.NR.3.1 | Identify and compare integers and explain the meaning of zero based on multiple authentic situations. | Relevance and Application <br> - Students should be able to use numerical reasoning to explain that positive and negative numbers are used together to describe quantities having opposite directions or values (e.g., temperature above/below zero, elevation above/below sea level, debits/credits, positive/negative electric charge). <br> - Students should be able to use positive and negative numbers to represent quantities in authentic situations and explain the meaning of zero based on each situation. <br> - Students should be able to interpret relevant, mathematical problems related to positive and negative numbers. |  | Example <br> - Write $-5^{\circ} \mathrm{C}>-9^{\circ} \mathrm{C}$ to express the fact that $-5^{\circ} \mathrm{C}$ is warmer than $-9^{\circ} \mathrm{C}$. |  |
| 6.NR.3.2 | Order and plot integers on a number line and use distance from zero to discover the connection between integers and their opposites. | Strategies and Methods <br> - Students should have opportun visual models to develop a deep <br> - Number lines should be indicate | ies to explore this concept using $r$ understanding. both vertically and horizontally. | Example <br> Stu dist eac | ts should be able to recognize that -a is the same from zero as a, and therefore, are opposites of her. |
| 6.NR.3.3 | Recognize and explain that opposite signs of integers indicate locations on opposite sides of zero on the number line; recognize and explain that the opposite of the opposite of a number is the number itself. | Fundamentals <br> - Students should be able to expl <br> - Students should be able to expl <br> - Students should be able to show | $n$ that zero is its own opposite. $n$ that the sign of an integer repre and explain why $-(-a)=a$. Which | nts its position is read as, "The | ive to zero on a number line. site of the opposite of a is the same as a." |
| 6.NR.3.4 | Write, interpret, and explain statements of order for rational numbers in authentic, | Strategies and Methods <br> - Students should be able to use numerical reasoning to interpret and explain the | Terminology <br> - Rational numbers are be written as a fraction | mbers that can where the | Examples <br> - Write -3 degrees Celsius >-7 degrees Celsius to express the fact that -3 degree Celsius is warmer than -7 degrees Celsius. |

[^1]Resources, materials, assessments not linked to SGO or unit planner will be reviewed at the local school level.

|  | mathematical situations. <br> Compare rational numbers, including integers, using equality and inequality symbols. | meaning of numerical statements of inequality as the relative position of two integers positioned on a number line. <br> - Students are introduced to rational numbers. Students should connect their understanding of fractions and integers to comprehend rational numbers as numbers that can be written as a fraction where the numerator and denominator are integers. | numerator and denominator are integers. | - Interpret -8.3 > -12.3 as a statement that -8.3 is located to the right of -12.3 on a number line oriented from left to right. |
| :---: | :---: | :---: | :---: | :---: |
| 6.NR.3.5 | Explain the absolute value of a rational number as its distance from zero on the number line; interpret absolute value as distance for a positive or negative quantity in a relevant situation. | Terminology <br> - Absolute value is a number's distance from zero ( 0 ) on a number line. | Fundamentals <br> - Students should be introduced to the absolute value symbol with this learning objective, i.e., $\left\|-\frac{3}{4}\right\|$. <br> - Students should conclude through exploration that absolute value and distance are always expressed as a positive value. | Example <br> - For an account balance of -51.25 dollars, write $\|-51.25\|=51.25$ to describe the size of the debt in dollars. |
| 6.NR.3.6 | Distinguish comparisons of absolute value from statements about order. | Example <br> - Recognize that an account | less than -30 dollars represents a debt great | n 30 dollars. |

| 7.NR.1.3 | Represent addition and subtraction with <br> rational numbers on a horizontal or a <br> vertical number line diagram to solve <br> authentic problems. |
| :--- | :--- |

## Strategies and Methods

- Students should represent a variety of types of rational numbers on a number line diagram presented both horizontally and vertically.
