Marietta City Schools

## 2023-2024 District Unit Planner

| Grade 7 Honors Mathematics |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Unit title | Unit 1: Making Relevant Connections within The Number System | MYP year | 2 | Unit duration (hrs) | 27 hours |

Mastering Content and Skills through INQUIRY (Establishing the purpose of the Unit): What will students learn?

## GA DoE Standards

## Standards

Gifted Strand 2: Creative Thinking Skills: Students will develop and utilize creative thinking through a variety of products and problem solving.
7.NR. 1 Solve relevant, mathematical problems, including multi-step problems, involving the four operations with rational numbers and quantities in any form (integers, percentages, fractions, and decimal numbers).
7.MP: Display perseverance and patience in problem-solving. Demonstrate skills and strategies needed to succeed in mathematics, including critical thinking, reasoning, and effective collaboration and expression. Seek help and apply feedback. Set and monitor goals.
Concepts/Skills to support mastery of standards

[^0]| NUMERICAL REASONING - integers, percentages, fractions, decimal numbers |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 7.NR.1: Solve relevant, mathematical problems, including multi-step problems, involving the four operations with rational numbers and quantities in any form (integers, percentages, fractions, and decimal numbers). |  |  |  |  |  |
|  | Expectations | Evidence of Student Learning <br> (not all inclusive; see Grade Level Overview for more details) |  |  |  |
| 7.NR.1.1 | Show that a number and its opposite have a sum of 0 (are additive inverses). Describe situations in which opposite quantities combine to make 0 . | Terminology <br> - In the equation $3+-3=0,3$ and -3 are additive inverses of each other. |  | Example <br> - Your bank account balance is $\mathbf{-} \mathbf{\$ 2 5 . 0 0}$. You deposit $\$ 25.00$ into your account. The net balance is $\$ 0.00$. |  |
| 7.NR.1.2 | Show and explain $\mathrm{p}+\mathrm{q}$ as the number located a distance $\|q\|$ from $p$, in the positive or negative direction, depending on whether $q$ is positive or negative. Interpret sums of rational numbers by describing applicable situations. | Strategies and Methods <br> - Students should be able to add and subtract integers and other rational numbers presented within relevant, mathematical problems, using strategic thinking and a variety of tools. |  | Example <br> - $6+(-4)$ is 4 units to the left of 6 on a horizontal number line or 4 units down from 6 on a vertical number line. |  |
| 7.NR.1.3 | Represent addition and subtraction with rational numbers on a horizontal or a vertical number line diagram to solve authentic problems. | Strategies and Methods <br> - Students should represent a variety of types of rational numbers on a number line diagram presented both horizontally and vertically. |  |  |  |
| 7.NR.1.4 | Show and explain subtraction of rational numbers as adding the additive inverse, p -$q=p+(-q)$. Show that the distance between two rational numbers on the number line is the absolute value of their difference and apply this principle in contextual situations. | Examples <br> - Find the distance between a submarine submerged at a depth of $27 \frac{3}{4}$ feet below sea level and an airplane flying at an altitude of $1262 \frac{1}{2}$ feet above sea level. <br> - $-\frac{1}{2}-(-2)$ is the same expression as $-\frac{1}{2}+-(-2)$, which is 2 units to the right of $-\frac{1}{2}$ on a horizontal number line or 2 units up from $-\frac{1}{2}$ on a vertical number line. |  |  |  |
| 7.NR.1.5 | Apply properties of operations, including part-whole reasoning, as strategies to add and subtract rational numbers. | Fundamentals <br> - Students should be allowed to explore the signs of integers and what they really mean to discover integer rules. | Strategies and Methods <br> - Students should be able to use the Commutative and Associative properties to combine more than two rational numbers flexibly. | Terminology <br> - Part-whole <br> reasoning refers to how numbers can be split into parts to add and subtract numbers more efficiently. | Example <br> - $(-8)+5+(-2)$ may be solved as $(-8)+($ $-2)+5$ to first make -10 by using the Commutative Property. |

[^1]Resources, materials, assessments not linked to SGO or unit planner will be reviewed at the local school level.

| 7.NR.1.6 | Make sense of multiplication of rational numbers using realistic applications. | Strategies and Methods <br> - Student should have opportunities to use concepts of repeated addition and the meaning of a negative sign as the "opposite of," with both models and representations, leading to deriving the rules for multiplying signed numbers. <br> - Models may include, but are not limited to, number lines and counters. |  | Examples <br> - $4^{*}(-5)$ is 4 groups of $(-5)$ and $(-4) *(-3)$ is the opposite of $4^{*}(-3)$. <br> - If yellow counters represent positive amounts and red counters represent negative amounts, you can model 3 * ( -2 ) as three groups of two red counters. <br> - David has a $\$ 0.00$ balance in his bank account. He makes three withdrawals of $\$ 1.46$ each. What is his bank account balance after the three withdrawals? |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 7.NR.1.7 | Show and explain that integers can be divided, assuming the divisor is not zero, and every quotient of integers is a rational number. | Fundamentals <br> - If p and q are integers ( $\mathrm{q} \neq 0$ ), then $-\left(\frac{p}{q}\right)=$ $\frac{(-p)}{q}=\frac{p}{(-q)}$. |  | Example <br> - $-\left(\frac{20}{5}\right)=-4$ is the same as $\frac{(-20)}{5}=-4$ and $\frac{20}{(-5)}$ |  |
| 7.NR.1.8 | Represent the multiplication and division of integers using a variety of strategies and interpret products and quotients of rational | Fundamentals <br> - Students should be allowed to explore the signs of integers and what they really mean to discover integer rules. | Strategies and Methods <br> - Students can represent multiplication and division using number lines, counters, etc. | Example <br> - Create a model and realistic situations for each of the products. Write and model the family of equations related to $2 \times 3=6$. |  |
|  | relevant situation. |  |  |  |  |
|  |  |  |  |  | pucheres ot eppes or 5300 per peak |
|  |  |  |  | *x-s-6 6 \%ritur | urs eation 2 peatrosed spples |
|  |  |  |  | ¢ | cee fireats |
|  |  |  |  | ${ }^{-2 \times-1-6}{ }^{\text {a }}$ | 63 3 detest 52.00 each |
| 7.NR.1.9 | Apply properties of operations as strategies to solve multiplication and division problems involving rational numbers represented in an applicable scenario. | Fundamentals <br> - Students should be allowed to explore the signs of integers and what they really mean to discover integer rules. <br> - Students should be able to reason about direction on a number line when representing multiplication and division using the tool. |  | Strategies and Methods <br> - Students should be able to use the Commutative and Associative properties to combine more than two rational numbers flexibly. | Example <br> - $(-8) * 2 *(-5)$ may be solved as $(-8) *\left(2^{*}(-\right.$ 5)) to multiply by negative ten, using the Associative Property. |
| 7.NR.1.10 | Convert rational numbers between forms to include fractions, decimal numbers and percentages, using understanding of the part divided by the whole. Know that the decimal form of a rational number terminates in Os or eventually repeats. | Fundamentals <br> - This is an extension of previous understanding from 6th grade of writing common fractions as decimal numbers and percentages. |  | Age/Developmentally Appropriate <br> - Students should know that every rational number can be written as the ratio of two integers, terminating decimal numbers, or repeating decimal numbers. |  |

| 7.NR.1.11 | Solve multi-step, contextual problems <br> involving rational numbers, converting <br> between forms as appropriate, and <br> assessing the reasonableness of answers <br> using mental computation and estimation <br> strategies. |
| :--- | :--- |

## Example

- If Sara makes $\$ 25$ an hour gets a $10 \%$ raise, she will make an additional $\frac{1}{10}$ of her salary an hour, or $\$ 2.50$, for a new salary of \$27.50.

## Vocabulary

K12 Mathematics Glossary
Rational number
Opposite
Absolute value
Additive inverse
Zero pair
Integers
Repeating Decimal
Terminating Decimal
Negative Numbers
Positive Numbers
Long Division
Multiplicative Inverse
Rational Numbers

| Key concept | Related concept(s) | Global context |
| :--- | :--- | :--- |
| Relationships <br> The connections and associations between properties, <br> objects, people and ideas. | Model, Representation | Identity and Relationships |

## Statement of inquiry

Mathematical models can help people represent real world relationships using operations with rational numbers.

## inquiry question

[^2]
## Published: August, 2023

Resources, materials, assessments not linked to SGO or unit planner will be reviewed at the local school level.

Debatable - Is there one best method for solving operations with rational numbers?

| MYP Objectives | Assessment Tasks |  |
| :---: | :---: | :---: |
| What specific MYP objectives will be addressed during this unit? | Relationship between summative assessment task(s) and statement of inquiry: | List of common formative and summative assessments. |
| Criterion A: Knowing and Understanding Criterion D: Investigating Patterns | Students will demonstrate how to use mathematical models to represent real world situations with rational numbers. | Formative Assessment(s): <br> Unit 1 CFA <br> Summative Assessment(s): <br> Unit 1: Making Relevant Connections within the Number System <br> Unit 1 MYP Assessment- Debits and Credits <br> Teacher Guidance <br> Student Reproductibles |
