

<b>Grade &amp; Course:</b> 9-12 Chemistry		<b>Topic:</b> Periodic Table	<b>Duration:</b> 3 weeks
<p><b>Georgia Standards and Content:</b></p> <p><b>SC1. Obtain, evaluate, and communicate information about the use of the modern atomic theory and periodic law to explain the characteristics of atoms and elements.</b></p> <p>b. Construct an argument to support the claim that the proton (and not the neutron or electron) defines the element’s identity.</p> <p>d. Construct an explanation that relates the relative abundance of isotopes of a particular element to the atomic mass of the element.</p> <p>e. Construct an explanation of light emission and the movement of electrons to identify elements.</p> <p>f. Use the periodic table as a model to predict the relative properties of elements based on the patterns of electrons in the outermost energy level of atoms (i.e. including atomic radii, ionization energy, and electronegativity).</p> <p>g. Develop and use models, including electron configuration of atoms and ions, to predict an element’s chemical properties.</p>			
<b>Narrative / Background Information</b>			
<p><b>Prior Student Knowledge: (REFLECTION – PRIOR TO TEACHING THE UNIT)</b></p> <p><b>S8P1. Obtain, evaluate, and communicate information about the structure and properties of matter.</b></p> <p>e. Develop models (e.g., atomic-level models, including drawings, and computer representations) by analyzing patterns within the periodic table that illustrate the structure, composition, and characteristics of atoms (protons, neutrons, and electrons) and simple molecules.</p>			
<p><b>Year-Long Anchoring Phenomena: (LEARNING PROCESS)</b></p> <p>Changes to the measurement of chemicals added to Flint Michigan’s water supply created dangerous levels of lead contamination in the drinking water.</p>			
<p><b>Unit Phenomena (LEARNING PROCESS)</b></p> <p>Within the last five years, new elements were discovered and added to the Periodic Table.</p>			
<p><b>MYP Inquiry Statement:</b></p> <p>The chemical and physical properties of an element can be determined by its placement on the periodic table.</p>			
<p><b>MYP Global Context:</b></p> <p>Scientific and Technical Innovation (Systems, models, methods, products, processes and solutions)</p>			
<p><b>Approaches to Learning Skills:</b></p> <p>Obtaining, evaluating, and communicating information</p> <p>Analyzing and interpreting data</p> <p>Make guesses, ask what if questions and generate testable hypotheses</p> <p>Research Skills</p> <p>Thinking Skills</p> <p>Communication Skills</p>	<p><b>Disciplinary Core Ideas: (KNOWLEDGE &amp; SKILLS)</b></p> <p>History of the Periodic Table</p> <p>Atomic Radius</p> <p>Electronegativity</p> <p>Ionization</p> <p>Energy Group</p> <p>Properties</p> <p>Reactivity</p>	<p><b>Crosscutting Concepts: (KNOWLEDGE &amp; SKILLS)</b></p> <p>Patterns</p> <p>Energy &amp; Matter</p> <p>Systems &amp; System Models</p>	<p><b>MYP Key and Related Concepts:</b></p> <p>Key Concept: Change</p> <p>Related Change: Patterns &amp; Energy</p>

**Possible Preconceptions/Misconceptions: (REFLECTION – PRIOR TO TEACHING THE UNIT)**

- Particles possess the same properties as the materials they compose. For example, atoms of copper are “orange and shiny,” gas molecules are transparent, and solid molecules are hard.
- Particles are viewed as mini-versions of the substances they comprise.
- Particles are often misrepresented in sketches. No differentiation is made between atoms and molecules.
- Particles misrepresented and undifferentiated in concepts involving elements, compounds, mixtures, solutions and substances. Particles cannot be “seen”, so they do not need to exist in a functioning model to explain the behavior of matter.
- Particles are in constant random motion. Students may have a hard time realizing this concept applies to atoms.
- Space between particles is “empty”. Novick and Nussbaum (1978, 1981) investigated this notion in studies involving Israeli 13-14 year olds and 10-20 year old Americans. They showed that the notion that empty space exists between particles causes students considerable difficulties.

**Key Vocabulary: (KNOWLEDGE & SKILLS)**

Microscopic  
Macroscopic

Sub-microscopic  
c Group  
Period  
Electron configuration  
Orbital Notation  
Diagram Shells  
Valence shell  
Valence electron  
Electron cloud  
Periodicity  
Periodic trends  
Ionization  
energy Atomic  
radius  
Electronegativity  
Noble Gas Notation  
Monatomic (atomic)  
element Diatomic element  
Atomic theory of matter  
Dalton’s atomic theory  
Heisenberg’s Principle  
Pauli exclusion Principle  
Aufbau Principle  
Hund’s Rule

**Inquiry Questions:**

Factual -

- What makes the seven diatomic molecules unique?
- What postulates of Dalton’s atomic theory support the current atomic theory?
- How is the Aufbau Principle related to the structure of the Periodic Table of Elements?

Conceptual -

- Why are elements with similar properties within the same family?
- Why does atomic radius decrease across energy levels?
- How do chemists use the Periodic Table of Elements to predict reactions?

Debatable -

- Should society have control/approval over nuclear fusion research?

**Unit Objectives:**

Learning Activities and Experiences	Inquiry & Obtain: (LEARNING PROCESS)	Evaluate: (LEARNING PROCESS)	Communicate: (LEARNING PROCESS)
-------------------------------------	---	---------------------------------	------------------------------------

<p><b>Week 1:</b></p>	<p><b>Phenomenon</b> No other element on planet Earth will have the same number of protons as another element.</p> <p><b>Gathering</b> Aufbau's Principle, Hund's Rule, and the Pauli Exclusion Principle PowerPoint Electron Configuration POGIL Activity Electron Configuration Gizmo /Simulation Orbital Notation Khan Academy Noble Gas Notation Activity</p>	<p>Formative Assessment #1 - Socratic Quiz</p>	<p>Atomic Theory Timeline Project</p> <p>CER - Orbital Notation or Noble Gas Notation which is best to effectively show the arrangement-distribution of electrons within energy levels?</p>
<p><b>Week 2:</b></p>	<p><b>Phenomenon</b> Within the last five years, new elements were discovered and added to the Periodic Table.</p> <p><b>Gathering</b> Review Formative Assessment #1 with Instructor Periodic Trends cK12 Activity Electron Dot Notation Activity</p>	<p>Formative Assessment # 2 - Schoology AMP</p>	<p>Atomic Theory Timeline Presentations</p>
<p><b>Week 3:</b></p>	<p><b>Phenomenon</b> When electrons are excited and fall back to their ground state some emit distinguishable colors of visible light.</p> <p><b>Gathering</b> Review Formative Assessment #2 with Instructor Flame Test Lab</p>	<p>Summative Assessment: Schoology AMP</p>	<p>Criterion D - Essay Highlights</p>
