### Content Specific Information (texts, documents, methods)

#### Statement of Inquiry:
- **All living things are composed of cells with similar structures and life cycles.**

**Phenomenon:** With sickle cell disease, an inherited group of disorders, red blood cells contort into a sickle shape. The cells die early, leaving a shortage of healthy red blood cells (sickle cell anemia), and can block blood flow causing pain (sickle cell crisis).

**Crosscutting Concepts**
- Structure and Function
- Interactions
- Stability and Change
- Patterns

**CORE IDEAS**
- Cellular Structure:

#### Statement of Inquiry:
- **Various Functions of a cell can be predicted through the complex structures of their molecules.**

**Phenomenon:** Sickle cell disease is caused by mutations in the beta-globin (HBB) gene that lead to the production of an abnormal version of a subunit of hemoglobin — the protein responsible for carrying oxygen in red blood cells.

**Crosscutting Concepts**
- Structure and Function
- Interactions
- Stability and Change

**CORE IDEAS**
- Properties of Water
- Organic Compounds
- Chemistry Basics
- Macromolecules:

#### Statement of Inquiry:
- **Research is continuously being conducted to find novel applications for enzymes that will promote human health and wellness.**

**Phenomenon:** The beta globin protein is one of the subunits of hemoglobin, a protein necessary for the oxygen-carrying function of red blood cells. People with the sickle cell mutation in both copies of the HBB gene produce proteins that clump together and lead to changes in the shape and behavior of red blood cells.

**Crosscutting Concepts**
- Structure and Function
- Systems and System models
- Patterns

**CORE IDEAS**
- Stability and Change
- Systems & System Models
- Cause and Effect

#### Statement of Inquiry:
- **Advancements in biotechnology supports complex research into the inheritance patterns and genetics of all living things.**

**Phenomenon:** The causes and effects of sickle cell anemia – A base substitution mutation drives significant phenotypic change in humans.

**Crosscutting Concepts**
- Structure and Function
- Systems and System models
- Patterns

**CORE IDEAS**
- Genetics: Mutations/Variation
- Cell Division: Mitosis/Meiosis/Cytokinesis
- Down

#### Statement of Inquiry:
- **In recent years, the basic biochemical unity of all plants, fungi, animals, and microbes has become increasingly apparent.**

**Phenomenon:** The correction of anemia in Sickle Cell Disease requires careful balancing of the detrimental effects of anemia with the potential risks associated with increased blood viscosity.

**Crosscutting Concepts**
- Systems and System models
- Patterns
- Stability and Change
- Interactions and Equilibrium

**CORE IDEAS:**
- What is the IA?
- Academic Integrity Policy
- Rubrics

---

**Themes:** A = Unity & Diversity, B = Form & Function, C = Interaction & Interdependence, D = Continuity & Change

**Level of Organization:** 1 = Molecules, 2 = Cells, 3 = Organisms, 4 = Ecosystems

**Published:** August, 2023

Resources, materials, assessments not linked to SGO or unit planner will be reviewed at the local school level.

### Level Specific Differentiation
Marietta City Schools teachers provide specific differentiation of learning experiences for all students. Details for differentiation for learning experiences are included on the district unit planners.

### Resources
- Textbook TBD – evaluation of resources
- [IB Biology Guide First Assessment 2025](#)
- IB Biology Schoology Course
- Discovery Education Biology and Chemistry Resources

Additional Resources: Old Syllabus
- Hodder Study and Revision Guide for the IB Diploma
- Hodder IA Internal Assessment for Biology

Published: August, 2023

Resources, materials, assessments not linked to SGO or unit planner will be reviewed at the local school level.
