

## Marietta City Schools

## 2023–2024 District Unit Planner

<b>Teacher(s)</b>	IB ESS PLC	<b>Subject Group and Course</b>	Group 4 - ESS		
<b>Course Part and Topic</b>	Topic 4 Water and Aquatic Food Systems	<b>SL or HL / Year 1 or 2</b>	SL Year 2	<b>Time</b>	7 weeks
<b>Unit Description and Texts</b>		<b>DP Assessment(s) for Unit</b>			
<ul style="list-style-type: none"> <li>● Oxford Textbook Topic 4</li> <li>● Topic 4.1 Intro to Water Systems</li> <li>● Topic 4.2 Access to Freshwater</li> <li>● Topic 4.3 Aquatic Food Production Systems</li> <li>● Topic 4.4 Water Pollution</li> </ul> <p>Phenomenon: Water use has been growing at more than twice the rate of population increase in the last century, and although there is no global water scarcity as such, an increasing number of regions are chronically short of water.</p>		<ul style="list-style-type: none"> <li>● Formative/Summative assessment quizzes and activities/reports to check for understanding - Based in IB exam questions and format</li> </ul>			

***INQUIRY: establishing the purpose of the unit***

<b>Transfer Goals</b> <i>List here one to three big, overarching, long-term goals for this unit. Transfer goals are the major goals that ask students to “transfer” or apply their knowledge, skills, and concepts at the end of the unit under new/different circumstances, and on their own without scaffolding from the teacher.</i>
<b>Statement of Inquiry</b> Most freshwater systems are naturally oligotrophic (nutrient poor).  Significant ideas:

The hydrological cycle is a system of water flows and storages that may be disrupted by human activity.  
 The ocean circulatory system (ocean conveyor belt) influences the climate and global distribution of water (matter and energy).  
 The supplies of freshwater resources are inequitably available and unevenly distributed, which can lead to conflict and concerns over water security.  
 Freshwater resources can be sustainably managed using a variety of different approaches.  
 Aquatic systems provide a source of food production.  
 Unsustainable use of aquatic ecosystems can lead to environmental degradation and collapse of wild fisheries.  
 Aquaculture provides potential for increased food production.  
 Water pollution, both to groundwater and surface water, is a major global problem, the effects of which influence human and other biological systems.

***ACTION: teaching and learning through inquiry***

Content / Skills / Concepts - Essential Understandings	Learning Process <i>Check the boxes for any pedagogical approaches used during the unit. Aim for a variety of approaches to help facilitate learning.</i>
<p><u>Students will know the following content:</u></p> <ul style="list-style-type: none"> <li>• Solar radiation drives the hydrological cycle.</li> <li>• Freshwater makes up only a small fraction (approximately 2.6% by volume) of the Earth’s water storages.</li> <li>• Storages in the hydrological cycle include organisms, soil and various water bodies, including oceans, groundwater (aquifers), lakes, rivers, atmosphere, glaciers and ice caps.</li> <li>• Flows in the hydrological cycle include evapotranspiration, sublimation, evaporation, condensation, advection (wind-blown movement), precipitation, melting, freezing, flooding, surface runoff, infiltration, percolation, and stream-flow or currents.</li> <li>• Human activities such as agriculture, deforestation and urbanization have a significant impact on surface runoff and infiltration.</li> <li>• Ocean circulation systems are driven by differences in temperature and salinity. The resulting difference in water density drives the ocean conveyor belt, which distributes heat around the world, and thus affects climate.</li> <li>• Access to an adequate freshwater supply varies widely.</li> </ul>	<p>Learning experiences and strategies/planning for self-supporting learning:</p> <ul style="list-style-type: none"> <li><input checked="" type="checkbox"/> Lecture</li> <li><input type="checkbox"/> Socratic seminar</li> <li><input checked="" type="checkbox"/> Small group/pair work</li> <li><input checked="" type="checkbox"/> PowerPoint lecture/notes</li> <li><input checked="" type="checkbox"/> Individual presentations</li> <li><input checked="" type="checkbox"/> Group presentations</li> <li><input checked="" type="checkbox"/> Student lecture/leading</li> </ul>

Published: August, 2023

Resources, materials, assessments not linked to SGO or unit planner will be reviewed at the local school level.

<ul style="list-style-type: none"> <li>• Climate change may disrupt rainfall patterns and further affect this access.</li> <li>• As populations, irrigation and industrialization increase, the demand for fresh water increases.</li> <li>• Freshwater supplies may become limited through contamination and unsustainable abstraction.</li> <li>• Water supplies can be enhanced through reservoirs, redistribution, desalination, artificial recharge of aquifers and rainwater harvesting schemes. Water conservation (including grey-water recycling) can help to reduce demand but often requires a change in attitude by the water consumers.</li> <li>• The scarcity of water resources can lead to conflict between human populations, particularly where sources are shared.</li> <li>• Demand for aquatic food resources continues to increase as the human population grows and diet changes.</li> <li>• Photosynthesis by phytoplankton supports a highly diverse range of food webs.             <ul style="list-style-type: none"> <li>• Aquatic (freshwater and marine) flora and fauna are harvested by humans.</li> </ul> </li> <li>• The highest rates of productivity are found near coastlines or in shallow seas, where upwellings and nutrient enrichment of surface waters occurs.</li> <li>• Harvesting some species, such as seals and whales, can be controversial. Ethical issues arise over biorights, rights of indigenous cultures and international conservation legislation.</li> <li>• Developments in fishing equipment and changes to fishing methods have led to dwindling fish stocks and damage to habitats.</li> <li>• Unsustainable exploitation of aquatic systems can be mitigated at a variety of levels (international, national, local and individual) through policy, legislation and changes in consumer behaviour.</li> <li>• Aquaculture has grown to provide additional food resources and support economic development and is expected to continue to rise.</li> <li>• Issues around aquaculture include: loss of habitats, pollution (with feed, antifouling agents, antibiotics and other medicines added to fish pens), spread of diseases and escaped species (some involving genetically modified organisms).</li> <li>• There are a variety of freshwater and marine pollution sources.</li> <li>• Types of aquatic pollutants include floating debris, organic material, inorganic plant nutrients (nitrates and phosphates), toxic metals, synthetic compounds, suspended solids, hot water, oil, radioactive pollution, pathogens, light, noise and biological pollutants (invasive species).</li> <li>• A wide range of parameters can be used to directly test the quality of aquatic systems, including pH, temperature, suspended solids (turbidity), metals, nitrates and phosphates.</li> </ul>	<p>□ Interdisciplinary learning</p> <p>Details:</p> <p><i>Students will learn through a combination of presentations, team/small group work, activities surrounding threats to and conservation of freshwater and aquatic food production systems</i></p> <p>Other(s): Link and spiral other topics via projects</p>
	<p><b>Formative assessment(s):</b></p> <p>Quizzes In class activities Case studies Research assignments</p> <p><b>Guidance:</b></p> <ul style="list-style-type: none"> <li>● <b>The effect of urbanization on water flows and potential of flash floods should be covered.</b></li> <li>● <b>Consider examples of unequal distribution and inequitable supply.</b></li> <li>● <b>Wild fisheries are also known as “capture fisheries”.</b></li> <li>● <b>Aquaculture is the farming of aquatic organisms in both coastal and inland areas that involves intervention in the rearing process to enhance production.</b></li> <li>● <b>Examine different points of view regarding harvesting of a controversial species; for example, the historical Inuit tradition of whaling versus modern international conventions.</b></li> <li>● <b>When looking at the increase in demand for food resources, consideration should be given</b></li> </ul>

<p>•Biodegradation of organic material utilizes oxygen, which can lead to anoxic conditions and subsequent anaerobic decomposition, which in turn leads to formation of methane, hydrogen sulfide and ammonia (toxic gases).</p> <p><u>Students will develop the following skills:</u></p> <ul style="list-style-type: none"> <li>• Discuss human impact on the hydrological cycle.</li> <li>• Construct and analyze a hydrological cycle diagram.</li> <li>• Evaluate the strategies that can be used to meet an increasing demand for fresh water.</li> <li>• Discuss, with reference to a case study, how shared freshwater resources have given rise to international conflict.</li> <li>• Discuss, with reference to a case study, the controversial harvesting of a named species.</li> <li>• Evaluate strategies that can be used to avoid unsustainable fishing.</li> <li>• Explain the potential value of aquaculture for providing food for future generations.</li> <li>• Discuss a case study that demonstrates the impact of aquaculture.</li> </ul>	<p>to changes in attitude towards “health foods” and food fashions.</p> <ul style="list-style-type: none"> <li>• Consider how two contrasting fisheries have been managed and relate to the concept of sustainability; for example, cod fisheries in Newfoundland and Iceland. Issues that should be covered include: improvements to boats, fishing gear (trawler bags), and detection of fisheries and boats via satellites. Management aspects should include: use of quotas, designation of marine protected areas (exclusion zones), and restriction on types and size of fishing gear (including mesh size of nets).</li> <li>• Students should understand maximum sustainable yield (MSY) as applied to fish stocks.</li> <li>• Sources of freshwater pollution should include runoff, sewage, industrial discharge and solid domestic waste.</li> <li>• Sources of marine pollution should include rivers, pipelines, atmosphere and activities at sea (operational and accidental discharges).</li> <li>• The role of positive and negative feedback in the process of eutrophication should be covered. Coastal eutrophication can lead to red tide blooms.</li> <li>• With respect to measuring aquatic pollution, polluted and unpolluted sites (for example, upstream and downstream of a point source) should be compared.</li> </ul>
<p><b>International Mindedness:</b></p> <p>Many hydrological cycles are shared by various nations. This can lead to</p>	<p><b>Summative assessments:</b> Group project Summative assessment over each subtopic and over Topic 4 all</p>

<p>international disputes.</p> <p>Unequal access to fresh water can cause conflict between countries that have an abundance of freshwater and those that do not.</p> <p>Successful management of marine and some freshwater fisheries requires partnership between different nations.</p> <p>Countries with limited access to clean water often have higher incidences of water-borne illnesses.</p>	<p><b>Differentiation:</b></p> <ul style="list-style-type: none"> <li><input checked="" type="checkbox"/> Affirm identity - build self-esteem</li> <li><input checked="" type="checkbox"/> Value prior knowledge</li> <li><input checked="" type="checkbox"/> Scaffold learning</li> <li><input checked="" type="checkbox"/> Extend learning</li> </ul> <p><b>Details:</b></p> <ul style="list-style-type: none"> <li>● <i>SWD/504 – Accommodations Provided</i></li> <li>● <i>ELL – Reading &amp; Vocabulary Support</i></li> <li>● <i>Intervention Support</i></li> <li>● <i>Extensions – Enrichment Tasks and Project</i></li> </ul>
<p><b>Approaches to Learning (ATL)</b></p> <p><i>Check the boxes for any explicit approaches to learning connections made during the unit. For more information on ATL, please see <a href="#">the guide</a>.</i></p>
