

MCS MMS Physical Science Advanced Content Subject Group Overview

Unit Name	Properties of Matter	Atomic Structure & Periodic Table	Principles of Atomic Bonding	Chemical Reactions	Solutions, Acids, and Bases	Nuclear Chemistry	Energy	Forces & Motion	Waves	Electricity & Magnetism
Time Frame	3 Weeks	4 Weeks	3 Weeks	2 Weeks	3.5 Weeks	3 weeks	1.5 Weeks	4 Weeks	3.5 Weeks	2.5 Weeks
Standards	SPS5.a., b., SPS7. d.	SPS1.a., b., c.	SPS1.a., SPS2.a., b., c.	SPS3. a., b.	SPS6.a., b., c., d., e.	SPS1.a., SPS4. a., b., c.	SPS7.a., b., c.	SPS8.a., b., c., d.	SPS9.a., b., c., d., e.	SPS10. a., b., c.
Science & Engineering Practices	<p>Science & Engineering Practices</p> <p>Students will:</p> <ul style="list-style-type: none"> Ask questions to compare and contrast models depicting the particle arrangement and motion in solids, liquids, gasses, and plasma. Plan and carry out investigations to identify the relationships between temperature, pressure, volume, and density of gasses in closed systems. 	<p>Science & Engineering Practices</p> <p>Students will:</p> <ul style="list-style-type: none"> Develop and use models to compare and contrast the structure of atoms, ions, and isotopes. Analyze and interpret data to determine trends. Use the Periodic Table as a model to predict the above properties of main element groups. 	<p>Science & Engineering Practices</p> <p>Students will:</p> <ul style="list-style-type: none"> Develop and use models to compare and contrast the structure of atoms, ions, and isotopes. Analyze and interpret data to predict properties of ionic and covalent compounds. Develop and use models to predict formulas for stable, binary ionic compounds based on balance of charges. Use the International Union of Pure 	<p>Science & Engineering Practices</p> <p>Students will:</p> <ul style="list-style-type: none"> Plan and carry out investigations to generate evidence supporting the claim that mass is conserved during a chemical reaction. Develop and use a model of a chemical equation to illustrate how the total number of atoms is conserved during a chemical reaction. 	<p>Science & Engineering Practices</p> <p>Students will:</p> <ul style="list-style-type: none"> Develop and use models to explain the properties (solute/solvent, conductivity, and concentration) of solutions. Plan and carry out investigations to determine how temperature, surface area, and agitation affect the rate solutes dissolve in a specific solvent. Analyze and interpret data from a solubility curve to determine the effect of temperature on solubility. 	<p>Science & Engineering Practices</p> <p>Students will:</p> <ul style="list-style-type: none"> Develop and use models to compare and contrast the structure of atoms, ions, and isotopes. Develop a model that illustrates how the nucleus changes as a result of fission and fusion. Use mathematics and computational thinking to explain the process of half-life as it relates to radioactive decay. Construct arguments 	<p>Science & Engineering Practices</p> <p>Students will:</p> <ul style="list-style-type: none"> Construct explanations for energy transformations within a system. Plan and carry out investigations to describe how molecular motion relates to thermal energy changes in terms of conduction, convection, and radiation. Analyze and interpret specific heat data to justify the selection of a material for a practical application 	<p>Science & Engineering Practices</p> <p>Students will:</p> <ul style="list-style-type: none"> Plan and carry out an investigation to analyze the motion of an object using mathematical and graphical models. Construct an explanation based on experimental evidence to support the claims presented in Newton's three laws of motion. Analyze and interpret data to identify the relationship between mass and gravitational force for 	<p>Science & Engineering Practices</p> <p>Students will:</p> <ul style="list-style-type: none"> Analyze and interpret data to identify the relationships among wavelength, frequency, and energy in electromagnetic waves and amplitude and energy in mechanical waves. Ask questions to compare and contrast the characteristics of electromagnetic and 	<p>Science & Engineering Practices</p> <p>Students will:</p> <ul style="list-style-type: none"> Use mathematical and computational thinking to support a claim regarding relationships among voltage, current, and resistance. Develop and use models to illustrate and explain the conventional flow (direct and alternating) of current and the flow of electrons in simple series and parallel circuits. Plan and carry out

MCS MMS Physical Science Advanced Content Subject Group Overview

				and Applied Chemistry (IUPAC) nomenclature for translating between chemical names and chemical formulas.	<ul style="list-style-type: none"> Obtain and communicate information to explain the relationship between the structure and properties (e.g., pH, and color change in the presence of an indicator) of acids and bases. Plan and carry out investigations to detect patterns in order to classify common household substances as acidic, basic, or neutral. 	based on evidence about the applications, benefits, and problems of nuclear energy as an alternative energy source.	(e.g., insulators and cooking vessels). <ul style="list-style-type: none"> Analyze and interpret data to explain the flow of energy during phase changes using heating/cooling curves. 	falling objects. <ul style="list-style-type: none"> Use mathematics and computational thinking to identify the relationships between work, mechanical advantage, and simple machines. 	mechanical waves. <ul style="list-style-type: none"> Develop models based on experimental evidence that illustrates the phenomena of reflection, refraction, interference, and diffraction. Analyze and interpret data to explain how different media affect the speed and sound of light waves. Develop and use models to explain the changes in sound waves associated with the Doppler effect. 	investigations to determine the relationship between magnetism and the movement of electrical charge.

Approaches To Learning Instructional Strategies	<p>Self-Management: Organization: Bring necessary equipment and supplies to class.</p> <p>Communication: Take effective notes in class.</p>	<p>Communication: Organize and depict information logically.</p>	<p>Self-Management: Affective Practice focus and concentration</p>	<p>Communication: Make inferences and draw conclusions.</p>	<p>Critical Thinking: Identify trends and forecast possibilities</p>	<p>Critical Thinking: Make logical, reasonable judgments and create arguments to support them.</p>	<p>Critical Thinking: Consider consequences to events.</p>	<p>Research: Collect and analyze data to identify solutions and/or make informed decisions.</p> <p>Critical Thinking: Use models and simulations to explore complex systems and issues.</p>	<p>Communication: Negotiate ideas and knowledge with peers and teachers.</p>	<p>Collaboration: Work effectively with others.</p>
Statement of Inquiry	<p>Scientific and technical advancements have led to the development of models to make sense of changes in systems.</p> <p>Phenomena:</p>	<p>Scientific and technical advancements have enabled scientists to understand relationships and patterns that exist related to the structure and function of elements in our natural world.</p>	<p>Scientific and technical advancements have enabled scientists to understand the relationships and interactions between elements that are necessary for the creation of compounds.</p>	<p>Scientific and technical innovations allow us to visualize, model, and explain the balanced changes that occur in systems of matter during chemical reactions.</p>	<p>Scientific and technical innovations use the relationships and interactions between substances to create new solutions and products with specific properties.</p>	<p>Scientific and technical innovations help us to model changes in the nuclei that can be harnessed as sources of energy.</p>	<p>Scientific and technical innovations allow us to observe and measure thermal energy and the transfer of heat between systems in order to design products with desired features.</p> <p>Phenomena: How does turning on the classroom lights represent</p>	<p>Advances in science and technology have furthered humans' understanding of the relationship between forces, mass, and motion (velocity and acceleration) in systems.</p>	<p>Models allow us to examine patterns in wave behavior in order to identify relationships between energy, frequency, wavelength, and amplitude.</p> <p>Phenomena:</p>	<p>Advances in science and technology have allowed humans to design systems that make use of the movement of electrons and harness the relationship between electricity and magnetism.</p>

MCS MMS Physical Science Advanced Content Subject Group Overview

	<p>What effect does changes in altitude have on the behavior of gasses?</p> <p>CER: Students answer the phenomenon in a Claim-Evidence-Reasoning constructed response as a formative assessment. Allow students to make edits to their constructed response throughout the unit for a final summative submission.</p>	<p>Phenomena: How can I understand an element's properties by using the periodic table?</p> <p>CER: Students answer the phenomenon in a Claim-Evidence-Reasoning constructed response as a formative assessment. Allow students to make edits to their constructed response throughout the unit for a final summative submission.</p>	<p>Phenomena: Why is NaCl so different from Na and Cl?</p> <p>CER: Students answer the phenomenon in a Claim-Evidence-Reasoning constructed response as a formative assessment. Allow students to make edits to their constructed response throughout the unit for a final summative submission.</p>	<p>Phenomenon: How do atoms rearrange to form new substances?</p> <p>How do we use elements and compounds to make a rocket operate?</p> <p>CER: Students answer the phenomenon in a Claim-Evidence-Reasoning constructed response as a formative assessment. Allow students to make edits to their constructed response throughout the unit for a final summative submission.</p>	<p>Phenomenon: How can pH be used to determine whether a wound is healing properly?</p> <p>CER: Students answer the phenomenon in a Claim-Evidence-Reasoning constructed response as a formative assessment. Allow students to make edits to their constructed response throughout the unit for a final summative submission.</p>	<p>Phenomena: Is nuclear power a viable alternative energy source?</p> <p>CER: Students answer the phenomenon in a Claim-Evidence-Reasoning constructed response as a formative assessment. Allow students to make edits to their constructed response throughout the unit for a final summative submission.</p>	<p>energy transformations?</p> <p>How does specific heat data impact the design and selection of products for everyday use?</p> <p>CER: Students answer the phenomenon in a Claim-Evidence-Reasoning constructed response as a formative assessment. Allow students to make edits to their constructed response throughout the unit for a final summative submission.</p>	<p>Phenomena: How do seatbelts and air bags make use of Newton's Laws to prevent serious injury?</p> <p>CER: Students answer the phenomenon in a Claim-Evidence-Reasoning constructed response as a formative assessment. Allow students to make edits to their constructed response throughout the unit for a final summative submission.</p>	<p>Why does the pitch of a siren appear to change as it moves closer/farther away?</p> <p>CER: Students answer the phenomenon in a Claim-Evidence-Reasoning constructed response as a formative assessment. Allow students to make edits to their constructed response throughout the unit for a final summative submission.</p>	<p>Phenomena: How can I develop an appropriate circuit for a given function?</p> <p>CER: Students answer the phenomenon in a Claim-Evidence-Reasoning constructed response as a formative assessment. Allow students to make edits to their constructed response throughout the unit for a final summative submission.</p>

MCS MMS Physical Science Advanced Content Subject Group Overview

Key Concepts	Systems and system models (MYP/CCC) Systems are sets of interacting or interdependent components. Systems provide structure and order in human, natural and built environments. Systems can be static or dynamic, simple or complex.	Relationships (MYP) Relationships are the connections and associations between properties, objects, people and ideas - including the human community's connections with the world in which we live. Any change in a relationship brings consequences.	Relationships (MYP) Relationships are the connections and associations between properties, objects, people and ideas - including the human community's connections with the world in which we live. Any change in a relationship brings consequences.	Systems and system models (MYP/CCC) Systems are sets of interacting or interdependent components. Systems provide structure and order in human, natural and built environments. Systems can be static or dynamic, simple or complex.	Relationships (MYP) Relationships are the connections and associations between properties, objects, people and ideas - including the human community's connections with the world in which we live. Any change in a relationship brings consequences.	Change (MYP/CCC) Change is a conversion, transformation or movement from one form, state, or value to another. Inquiry into the concept of change involves understanding and evaluating causes, processes and consequences.	Systems and system models (MYP/CCC) Systems are sets of interacting or interdependent components. Systems provide structure and order in human, natural and built environments.
